

Digital Transformation SC Restaurant

Moving from Manual to Automated
Management

Goals

By the end of this presentation, you will be able to:

- Find problems with running a restaurant manually.
- See how a digital system connects orders, stock, and help.
- Check the financial benefits of going digital.
- Create a simple plan to start using new technology.

Operational Limitations of Manual Management

Handwritten Notes

Human Error Risks

Paper Records

Information Delays

Siloed Operations

No Real-time Visibility

Where Manual Work Causes the Most Loss

1

Stock Issues

Manual stock counts lead to frequent shortages or wasted ingredients.

2

Order Errors

Written orders cause delays and mistakes in the kitchen.

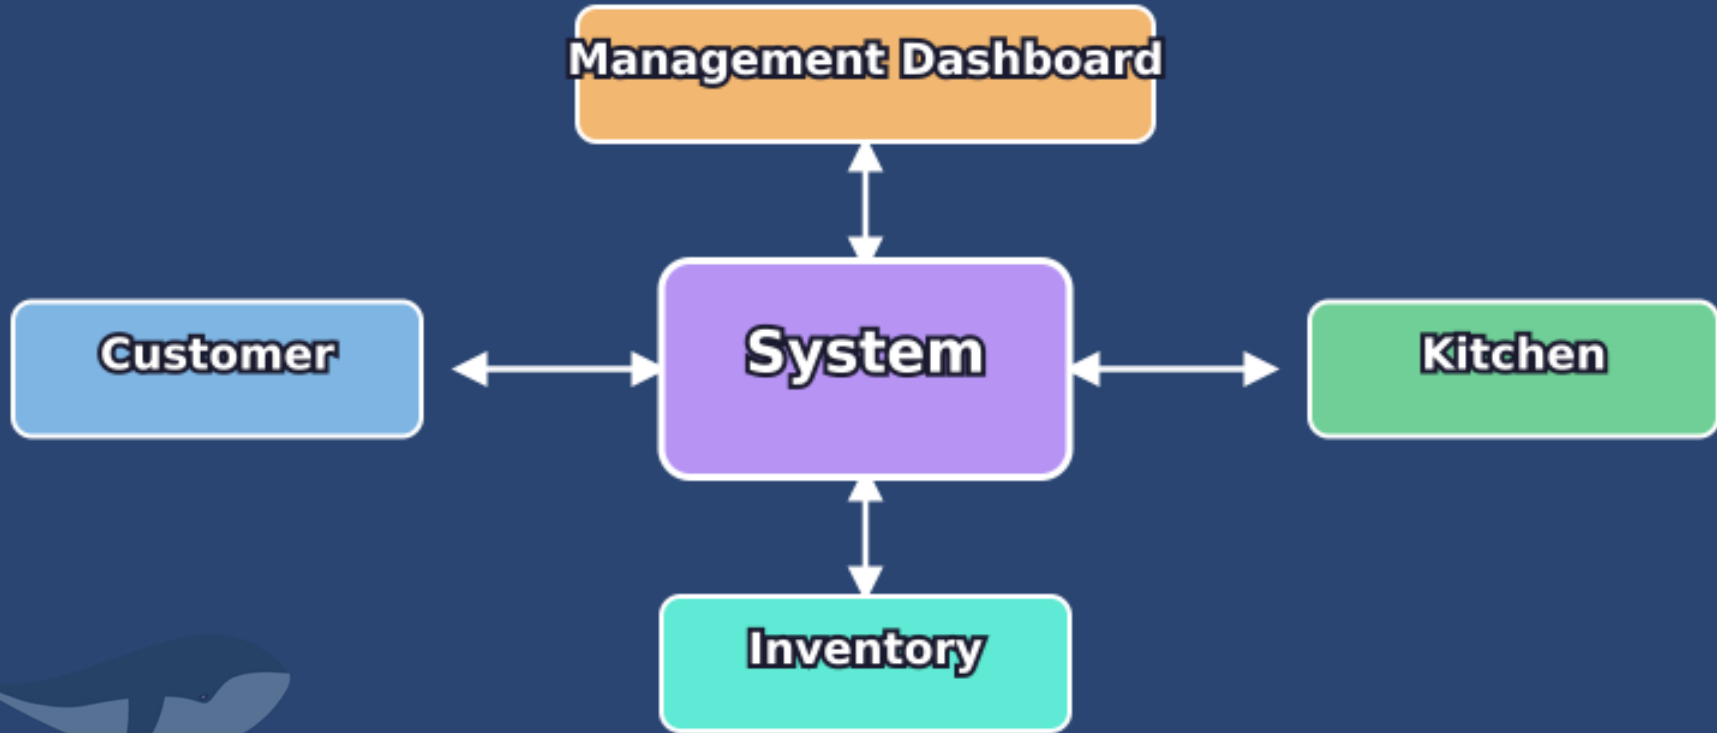

3

Slow Support

Handling customer questions manually results in slow response times.

Unified Automated Management System

Implementation Roadmap

Step 2

Automate Inventory

Implement stock tracking and low-level alerts.

Step 4

Add AI Support

Introduce AI for customer questions and reservations.

Step 1

Analyze Workflow

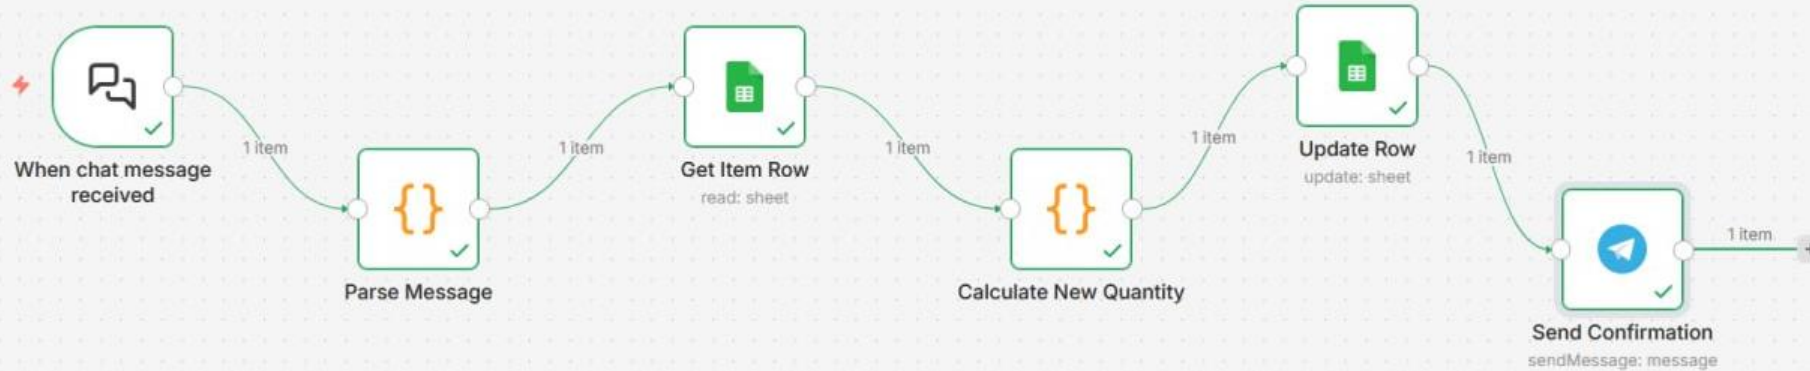

Review current manual processes and identify bottlenecks.

Step 3

Systemize Orders

Deploy digital order routing to the kitchen.

stock workflow

Order workflow

Digital Input

Orders received via form or bot are entered instantly into the system.

Automated Workflow

The system routes data to the kitchen and tracks status automatically for faster service.
